Event: On 24 Jun 2026 22:05 UTC a 7.5M earthquake, preceded by a strong foreshock, occurred in Venezuela. The impact on population is deemed high at this stage, with low visibility on the extent of the damage. Copernicus EMS Rapid Mapping is requested to provide damage assessment emergency mapping.

Data sources and analysis: Pre-event image: Pléiades Neo © CNES (2026), distributed by Airbus DS (acquired on 05/01/2026 at 15:10 UTC and 08/01/2026 at 15:17 UTC, resolution 0.3 m).
Post-event image: Legion © Vantor (2026), provided by European Space Imaging (acquired on 26/06/2026 at 15:10 UTC, resolution 0.5 m).
This image is used as background image.
All images are provided under COPERNICUS by the European Union and ESA, all rights reserved.

The thematic layer has been derived from post-event satellite image using a semi-automatic approach.

This analysis has been supplemented by the social media.

Map produced by ITHACA released by SERTIT on the 27/06/2026.

Details on this activation and service conditions available through the QR code or at the link: <https://mapping.emergency.copernicus.eu/activations/EMSR884>

Access to the portal

Data Access:

All data displayed on the map(s), as well as Land Use - Land Cover layer(s), are available in the Crisis Information Package and the Base Layer Package (for reference data). The table above is available in editable format in the Crisis Information Package. All products and data are also available for download on the portal.

Estimated Population:

Estimated population is based on Copernicus Global Human Settlement Layer (GHSL) dataset. Additional population datasets and analysis are available in the summary table.
