

EMSR771 - AO106
Flood in Italy
REGGIO EMILIA

Situation as of 20/10/2024 17:07 UTC
Delineation - Overview map 01

Flooded area
1,839.8 ha

Potentially affected
population
~ 150

Potentially Affected Built-up and Transportations

Built-up
3.6 ha

Road
28.3 km

Estimated flood depth (m)

- Below 0.50
- 0.50 - 1.00
- 1.00 - 2.00
- 2.00 - 4.00
- 4.00 - 6.00

General Information

- Area of Interest

Administrative Boundaries

- Municipality

Built-Up Area

- Residential
- Non residential
- School, university and research buildings
- Hospital or institutional care buildings
- Military

Hydrography

- Lake, River

Facilities

- Long-distance pipelines or lines
- Local pipelines or lines
- Dam
- Mining or extraction site
- Power plant
- Sport and recreation constructions
- Dump Site
- Water or Aquatic infrastructure

Transportation

- Highway
- Main road
- Local road
- Track
- Railway
- Airfield runway

Event Italy has been hit in recent days by a severe phase of bad weather, which has caused flooding in large parts of the country. In Emilia-Romagna, in particular, several rivers reached the third-highest alert level. During the night and early hours of October 20, several rivers in the city of Bologna overflowed, causing flooding in the city and neighboring municipalities: San Lazzaro, Medicina and Budrio. The situation is still ongoing, although the weather is expected to improve. The National Civil Protection System has been configured as national emergency. Copernicus EMS Rapid Mapping is requested to provide initial rough estimation, flood extent and damage assessment emergency mapping.

Data sources and analysis: Pre-event image: Sentinel-2A/B (2024) (acquired on 30/08/2024 at 10:18 UTC, resolution 10 m). This image is used as background image. Post-event image: Sentinel-1A/B (2024) (acquired on 20/10/2024 at 17:07 UTC, resolution 20 m).

All images are provided under COPERNICUS by the European Union and ESA, all rights reserved.

The thematic layer has been derived from post-event satellite image using a semi-automatic approach. Please be aware that the thematic accuracy might be lower in urban and forested areas due to inherent limitations of the SAR analysis technique.

The flood depth information is based on the analysis of post-event satellite imagery and on Digital Elevation Model data. The flooded area corresponds to the water observed in the most recent satellite imagery, excluding the permanent water.

Map produced by GAF AG released by SERTIT on the 21/10/2024.

Details on this activation and service conditions available through the QR code or at the link: <https://rapidmapping.emergency.copernicus.eu/EMSR771>

Consequences within the AOI			
	Unit of measurement	Affected	Total in AOI
Flooded area	ha	~ 150	1.839,8
Estimated population	Number of inhabitants		~ 220.000
Built-up	Residential Buildings	ha	0,9
	Office buildings	ha	0
	Wholesale and retail trade buildings	ha	0
	Industrial buildings	ha	2,7
	School, university and research buildings	ha	0
	Hospital or institutional care buildings	ha	0
	Military	ha	0
	Cemetery	ha	0
Transportation	Airfield runways	ha	0
	Helipad	ha	0
	Airfield runways	km	0
	Highways	km	0
	Primary Road	km	1,4
	Secondary Road	km	0,4
	Local Road	km	3,7
	Cart Track	km	22,8
Facilities	Long-distance railways	km	0
	Settling Basin	ha	0
	Constructions for mining or extraction	ha	0,5
	Power plant constructions	ha	0
	Sport and recreation constructions	ha	2,0
	Other civil engineering works not elsewhere classified	ha	1,8
	Long-distance pipelines, communication and electricity lines	km	4,6
	Local pipelines and cables	km	0
Land use	Dams	km	0
	Arable land	ha	1.598,2
	Shrub and/or herbaceous vegetation association	ha	230,5
	Forests	ha	6,6
	Heterogeneous agricultural areas	ha	3,7
	Pastures	ha	0,5
	Other	ha	0,3
	Open spaces with little or no vegetation	ha	0

Data Access:
All data displayed on the map(s), as well as the Physiography and Land Use - Land Cover layers, are available in the Crisis Information Package and the Base Layer Package (for reference data). The table above is available in editable format in the Crisis Information Package. All products and data are also available for download on the portal.

Estimated Population:
Estimated population is based on Copernicus Global Human Settlement Layer (GHSL) dataset. Additional population datasets and analysis are available in the summary table.

Data Sources:
Base Vector Layers: OpenStreetMap © OpenStreetMap contributors (2024), Wikimapia.org, GeoNames 2015, Corine Land Cover (CLC) 2018, EuroBoundaryMap 2017 ©EuroGeographics.
Inset Maps: JRC 2013, GISCO 2010 © EuroGeographics, Natural Earth 2012, CCM River DB © EUJRC2007, GeoNames 2015.
Digital Elevation Model: FABDEM (ForestAndBuildingsremovedCopernicusDEM) removes building and tree height biases from the Copernicus GLO 30 Digital Elevation Model (DEM) (Airbus,2020).
