

Situation as of 21/01/2026 03:01 UTC
Delineation - Overview map 01

Flooded area
EO-based 661.0 ha
Model-based 2,680.0 ha

Potentially affected population
~ 280

Potentially Affected Built-up and Transportations

Road
2.6 km

Built-Up
0.7 ha

Estimated flood depth (m)	Hydrography
Below 0.50	Lake, River
0.50 to 1.00	Facilities
1.00 to 2.00	Long-distance pipelines or lines
General Information	Transportation
Area of Interest	Highway
Detail map	Local road
Built-Up Area	Track
Residential	Airfield runway
	Airfield

Event Heavy rain that started in December, has caused several floods in Mozambique. The event is ongoing. Copernicus EMS Rapid Mapping is requested to provide initial rough estimation and flood extent emergency mapping

Data sources and analysis: Pre-event image: ESRI World Imagery © DigitalGlobe 2024 (acquired on 10/08/2024 at 00:00 UTC, resolution 1,1 m). Post-event image: PAZ satellite image © Hisdesat Servicios Estratégicos S.A., 2021 (acquired on 21/01/2026 at 03:01 UTC, resolution 8.2 m).

All images are provided under COPENICUS by the European Union and ESA, all rights reserved.

The thematic layer has been derived from post-event satellite image using a semi-automatic approach. Please be aware that the thematic accuracy might be lower in urban and forested areas due to inherent limitations of the SAR analysis technique.

The flooded area corresponds to the water observed in the most recent satellite imagery, excluding the permanent water.

The extrapolated flood extent and depth are generated by integrating observed flooded areas with a Digital Terrain Model (DTM). The model's accuracy and spatial coverage depend on DTM resolution and quality, enabling the prediction of potentially flooded areas in regions with limited visibility in imagery, such as urban and forested zones.

Map produced by ITHACA released by e-GEOS on the 21/01/2026.

Details on this activation and service conditions available through the QR code or at the link: <https://mapping.emergency.copernicus.eu/activations/EMSR857>
