Event: On the 09 September 2024 at 06:00 typhoon YAGI passed over central and northern Philippines, Hainan island and Guangdong province, southern China, and the regions of the north of Viet Nam and caused hefty rainfall, floods and landslides that have resulted in an increased number of casualties. The combined effects of the monsoon and tropical disturbances have caused flooding and flash floods in northern Laos and Thailand. In Viet Nam, the authorities have reported, as of 11 September, 127 fatalities, approximately 54 people still missing, more than 750 injured and over 52,000 evacuated people across northern provinces. Quang Ninh and Hai Phong provinces are the worst affected. Three provinces have declared emergencies: Lao Cai, Tuyen Quang and Yen Bai. Copernicus EMS Rapid Mapping is requested to provide an initial rough estimation and flood extent emergency mapping.

Data sources and analysis: Pre-event image: PlanetScope © Planet, 2024 (acquired on 16/04/2024 at 02:55 UTC, resolution 3 m). Post-event image: WorldView-2 © Maxar Technologies, Inc. (2024), (acquired on 14/09/2024 at 03:43 UTC, resolution 2 m). This image is used as background image.

The thematic layer has been derived from post-event satellite image by means of visual interpretation.

The flood depth information is based on the analysis of post-event satellite imagery and on Digital Elevation Model data. The flooded area corresponds to the water observed in the most recent satellite imagery, excluding the permanent water.
