Event: On 5 July 2026 in the morning, a wildfire was reported to have affected close to the Pyrenees Regional Park, France. The event is on-going and spreading, with damage reported to affect forestry, natural vegetation and potentially nearby infrastructure. Copernicus EMS Rapid Mapping is requested to provide initial rough estimation, wildfire extent and damage assessment emergency mapping.

Data sources and analysis: Pre-event image: Sentinel-2 (2026) (acquired on 30/06/2026 at 10:44 UTC, resolution 10.0 m).
Post-event image: Legion © Vantor (2026), provided by European Space Imaging (acquired on 08/07/2026 at 08:40 UTC, resolution 1.2 m).
This image is used as background image.
All images are provided under COPERNICUS by the European Union and ESA, all rights reserved.

The thematic layer has been derived from post-event satellite image using a semi-automatic approach.

Map produced by e-GEOS released by e-GEOS on the 08/07/2026.

Data Access:

All data displayed on the map(s), as well as Land Use - Land Cover layer(s), are available in the Crisis Information Package and the Base Layer Package (for reference data). The table above is available in editable format in the Crisis Information Package. All products and data are also available for download on the portal.

Estimated Population:

Estimated population is based on Copernicus Global Human Settlement Layer (GHSL) dataset. Additional population datasets and analysis are available in the summary table.
