Event: On 22 July 2026 at 18:00, a wildfire was reported to have affected Saumos, in the Nouvelle-Aquitaine region, France. The fire is ongoing and poses a significant threat to local communities, critical infrastructure, forests and nearby natural resources. Current weather conditions may favour its rapid spread, with possible population displacement and severe environmental damage. Copernicus EMS Rapid Mapping is requested to provide wildfire extent mapping and damage assessment emergency mapping.

Data sources and analysis: Pre-event image: Sentinel-2 (2026) (acquired on 21/07/2026 at 10:56 UTC, resolution 10.0 m). This image is used as background image. Post-event image: Legion © Vantor (2026), provided by European Space Imaging (acquired on 26/07/2026 at 10:12 UTC, resolution 2.0 m). The thematic layer has been derived from post-event satellite image using a semi-automatic approach.

The current burnt area cumulates all burnt area extents from previous post-event products.

Due to clouds, the burnt area delineation is not complete.
