	Current	Forecast	
	Jul 29, 14:07 UTC	Jul 30, 14:07 UTC	Jul 31, 14:07 UTC
Wind direction and speed	 16 km/h	 12 km/h	 11 km/h
Temperature and relative Humidity	 36°  34%	 30°  52%	 27°  58%

Data retrieved from ECMWF on Jul 29, 14:07 UTC. Calculated at: 44.796°N, -0.701°E.

Event On 22 July 2026 at 18:00, a wildfire was reported to have affected Saumos, in the Nouvelle-Aquitaine region, France. The fire is ongoing and poses a significant threat to local communities, critical infrastructure, forests and nearby natural resources. Current weather conditions may favour its rapid spread, with possible population displacement and severe environmental damage. Copernicus EMS Rapid Mapping is requested to provide wildfire extent mapping and damage assessment emergency mapping.

Data sources and analysis: Pre-event image: Sentinel-2 (2026) (acquired on 21/07/2026 at 10:56 UTC, resolution 10.0 m).
Post-event image: Legion © Vantor (2026), provided by European Space Imaging (acquired on 29/07/2026 at 14:07 UTC, resolution 1.2 m).
This image is used as background image.
All images are provided under COPERNICUS by the European Union and ESA, all rights reserved.

The thematic layer has been derived from post-event satellite image using a semi-automatic approach.

The current burnt area cumulates all burnt area extents from previous post-event products.

Due to dense smoke, the burnt area delineation is not complete.

Map produced by GMV released by SERTIT on the 30/07/2026.

Details on this activation and service conditions available through the QR code or at the link: <https://mapping.emergency.copernicus.eu/activations/EMSR899>
