BULLETIN FOR CYCLONIC ACTIVITY AND SIGNIFICANT TROPICAL WEATHER
IN THE SOUTHWEST INDIAN OCEAN

DATE: 09/08/2025 AT 1200 UTC

PART 1: WARNING SUMMARY

PART 2 : TROPICAL WEATHER DISCUSSION

The southwest Indian Ocean basin is gradually returning to a winter pattern unfavorable to cyclonic activity. Convective activity is still present in the vicinity of the remnants of AWO, which is currently filling up east of the Seychelles.

Filling up Low AWO

Information at 10 UTC :

Estimated position: 6.7S / 58.3E

Movement : West, 07 kt

Maximum wind speed (averaged over 10 minutes): 20 kt

Estimated central pressure: 1010 hPa

Before Monday, the remnants of AWO should disappear.

Development of a moderate tropical storm is not expected for the next 5 days.

NOTA BENE: The likelihood is an estimate of the chance of genesis of a moderate tropical storm over the basin within the next five days:

Very low: less than 10% Moderate: 30% to 60% Very high: over 90%

Low: 10% to 30% High: 60% to 90%

The Southwestern Indian ocean basin extends from the Equator to 40S and from the african coastlines to 90E.
